

Choice Based Credit System (CBCS) Syllabus for M.A./M.Sc. Statistics
1st- Semester for Batch 2018wef 2018and onwards BOSPG held on
19/11/2018

General Instructions for the Candidates

1. The **two years (4 semesters)** PG Programmes is of **96** credit weightage i.e. **24** credits/semester ($24 \times 4 = 96$).
2. Out of **24** credits in a semester a candidate has to obtain **14** credits compulsorily from the **Core Courses**, while the remaining **10** credits can be obtained from the **Electives(DCE, GE &OE)** in the following manner:
 - A candidate can obtain a maximum of **8** credits within his /her own Department out of specialization offered by the Department as **Discipline Centric Electives**.
 - **2**credits shall be obtained by the candidate from the **Electives(GE, OE)** offered by the Department other than his/her own. The candidate shall be free to obtain these **2** credits from the **General** or **Open Elective** or a **Combination of both**.

SEMESTER – I			
Course Type	Course Code	Title of the Course	No. of Credits
Core (CR)	ST18101CR	Probability and Distribution Theory - I	04
	ST18102CR	Sampling Techniques	04
	ST18103CR	Statistical Computing	04
	ST18104CR	Time Series Analysis	02

Open Elective(OE)	ST18112OE	Basic Time Series Analysis	02

Choice Based Credit System (CBCS) Syllabus for M.A./M.Sc. Statistics
1st- Semester for Batch 2018wef 2018and onwards BOSPG held on
19/11/2018

PROBABILITY AND DISTRIBUTION THEORY-I

COURSE NO: ST18101CR

No. of Credits-4

UNIT-I

Class of sets, fields, sigma fields, minimal sigma field, and Borel sigma field. Definition of probability: classical and relative frequency approach, discrete probability space, properties of probability based on axiomatic approach, Independence of events, conditional probability, total and compound probability rules. Bayes theorem and its applications. Random variable. Cumulative distribution function of random variables and its properties, probability function of a random variable.

UNIT-II

Joint distribution function and probability function of a random variable. Expectation of a random variable and its properties, conditional expectation, covariance and correlation. Moments, measure of location and dispersion of a random variable. Moment generating function, probability-generating function, Characteristic function of a real and vector valued random variables. Inversion formula, and Uniqueness theorem.

UNIT-III

Standard Univariate discrete distributions: Discrete Uniform, Bernoulli, Binomial, Poisson, Negative Binomial, Geometric, Hyper geometric, logarithmic distributions and their structural properties, relations and applications, Marginal and conditional distributions. Some idea of truncations.

UNIT-IV

Univariate Continuous distributions: Uniform, Beta, Gamma, Exponential, Pareto, Weibull, Laplace, Normal, Cauchy and their structural properties, relations and applications, Marginal and conditional distributions. Some idea of truncations.

TEXT BOOKS:

- Dudewicz, E.J. and Mishra, S.N. (1988): Modern Mathematical Statistics, Willy, Int'l Students edition
- Rohatgi, V.K. (1994): An Introduction to Probability Theory and Mathematical Statistics, Wiley Eastern.
- Rao, R.C. (1973): Linear Statistical Inference and its Applications, 2/e, Wiley Eastern.

Choice Based Credit System (CBCS) Syllabus for M.A./M.Sc. Statistics
1st- Semester for Batch 2018wef 2018and onwards BOSPG held on
19/11/2018

SAMPLING TECHNIQUES

COURSE NO: ST18102CR

No. of Credits-4

UNIT I

Simple Random Sampling: Concept of sampling design, expected value and sampling variance of the sample mean, expected value of the sample mean square and estimation of the variance. Determination of sample size. Simple random sampling as applied to qualitative characteristics.

UNIT II

Stratified random Sampling: Estimation of the population mean/total and its variance, choice of sample sizes in different strata, variance under different allocations. Comparison with unstratified sampling. Estimation of the gain in precision due to stratification, construction of strata.

UNIT III

Ratio and Regression methods of Estimation: Variance of the estimates, estimation of variances, optimum property of ratio and regression estimator. Ratio and regression estimator in stratified random sampling. Some modifications of ratio and regression estimators. Comparison among regression, ratio and simple unbiased estimates. Unbiased ratio type estimates.

UNIT-IV

Systematic Sampling: Sample mean and its variances. Comparison of systematic with simple random and stratified sampling in the general case and also in the case of linear trend.

Cluster sampling: Estimation of mean and its variance for equal and unequal clusters. Efficiency in terms of intra-class correlation. Optimum unit of sampling. Sampling with replacement and unequal probabilities. Estimation of mean and its variance.

TEXT BOOKS:

- Cochran, W. G: Sampling Techniques, 3rd edition, Wiley.
- Mukhopadhyay, P. (2000): Theory and Methods of Survey Sampling, Prentice Hall of India, Private limited, New Delhi

1st- Semester for Batch 2018wef 2018and onwards BOSPG held on
19/11/2018

STATISTICAL COMPUTING

COURSE NO: ST18103CR

No. of Credits-4

UNIT-I

Introduction to computers, Classification of computers, advantages, disadvantages and applications of computers, Basic set up of electronic computers, input and output devices. Basic idea about computer packages (Statistical Packages).

UNIT-II

Statistical Software's: MINITAB reading & Manipulation of data, Commands/Statements in MINITAB, Descriptive Statistics. Basic operations on matrices. Working with Software package MINITAB for graphics, EDA: Histogram, Plot, Box plot, Pi-chart, QQ plot, density plot, and Stem and Leaf.

UNIT-III

Using MINITAB: Correlation&Regression analysis: simple and multiple. Tests of significance, Errors in sampling, Critical region and level of significance, Test of significance of large samples, Test of single proportion, Test of significance of difference of proportions.

UNIT-IV

Using MINITAB: Chi-Square test for independence of attributes and Contingency table, t-test, Paired t-test, Test for correlation in sampling from normal population, F-test, testing of two variance of two univariate normal population.

TEXT BOOKS:

- B. Ryan and B.L. Joiner (2001). MINITAB Handbook, Fourth edition, Duxbury.
- R.A. Thisted (1988): Elements of Statistical Computing, Chapman and Hall.
- S.C. Gupta & V.K Kapoor (2012), Fundamentals of Mathematical Statistics, Sultan Chand & Sons.
- Dudewicz, E.J. and Mishra, S.N. (1988): Modern Mathematical Statistics, Wiley, Int'l Students edition.

Choice Based Credit System (CBCS) Syllabus for M.A./M.Sc. Statistics
1st Semester for Batch 2018wef 2018and onwards BOSPG held on
19/11/2018

TIME SERIES ANALYSIS

COURSE NO: ST18104CR

No. of Credits-2

UNIT –I

Introduction and history of time series, Trend, Linear and Non- Linear trend, periodic changes, Seasonal Variations, Analysis of time series, Mathematical Models of Time Series, Uses of the time series.

UNIT –II

Measurement of Trend, Method of Semi-fitting by principle of least squares, fitting by straight line by Least Squares, Merits and Limitations of given methods, Modified exponential curves and fittings.

19/11/2018

STOCHASTIC PROCESSES

COURSE NO: ST18105DCE

No. of Credits-4

UNIT I

Introduction to Stochastic Processes (SP's); Classification of Stochastic Processes according to state space and time domain. Definition of Markov Chain and examples. Countable state Markov chains (MC's), Chapman-Kolmogorov equations; Calculation of n-step transition probability and its limit.

UNIT II

Stationary distribution, Classification of states: persistent state, transient state and ergodic state, examples, limiting theorems concerning states; Simple Random Walk Model and gambler's ruin problem; expected duration of the game, Probability of ruin at the nth trail. And Probability of a draw at the rth trial.

UNIT III

Markov Process with Discrete state space: Poisson processes, Poisson processes and related distributions, Birth and death process; Markov Process with Continuous state space, Brownian Motion, Wiener Process, Differential equations for a Wiener Process, Kolmogorov Equations.

UNIT IV

Introduction of Branching process: Galton-Watson branching process, properties of generating functions of branching process and distribution of population size, Calculation of moments of Branching Process and distribution of total progeny. Probability of ultimate extinction, numerical illustrations.

TEXT BOOKS:

- Medhi, J. (1982): Stochastic Processes, Holden-Day.
- Baily, N.T.J. (1965): The Elements of Stochastic Processes: John Wiley
- Jagers P. (1974): Branching Processes with Biological Applications, Wiley.
- Harris, T.E. (1963): The Theory of Branching Processes, Springer-Verlag.
- Hoel, P.G., Port, S.C. and Stone, C.J (1972): Introduction to Stochastic Processes, Houghton Mifflin & Co.

1st- Semester for Batch 2018wef 2018and onwards BOSPG held on
19/11/2018

LINEAR ALGEBRA

COURSE NO: ST18106DCE

No. of Credits-2

UNIT-I

Algebra of Matrices, trace of a matrix, $\text{tr}(AB) = \text{tr}(BA)$, idempotent and nilpotent matrices, Inverse of square matrix, Inverse of partitioned matrices, Vector space, basis and dimensions, Rank of matrix, linear independence and linear dependence of row (column) vectors, characteristic and minimal equation, Cayley-Hamilton Theorem and its Applications.

UNIT-II

Linear equations, solution of homogenous and non-homogenous equations, Inner product spaces, orthogonal and orthonormal basis.

Eigen values and Eigen vectors of a matrix and their determination, orthogonal and Unitary matrices. Quadratic forms, reduction and classification of quadratic forms,

TEXT BOOKS:

- Grabill, Walter(1976). Matrices with Applications in Statistics, 2nd Ed. Wadsworth.
- Roa, C.R.(1973), Linear Statistical Inference and its Applications, 2nd Ed. John Wiley and Sons, Inc.
- Searel, S.R.(1982). Matrix Algebra useful for Statistics. John Wiley and Sons, Inc.
- Aziz, A, Rather, N.A. and Zargar, B.A.: Elementary Matrix Algebra, KBD(Kashmir Book Depo)
- Shanti Narayan, A text book of matrices, Narosa Publ.

Choice Based Credit System (CBCS) Syllabus for M.A./M.Sc. Statistics
1st- Semester for Batch 2018wef 2018and onwards BOSPG held on
19/11/2018

REAL ANALYSIS

COURSE NO: ST18107DCE

No. of Credits-2

UNIT-I

Real Analysis: Finite, countable and uncountable sets, bounded and unbounded sets, Archimedean property, ordered field, completeness of \mathbb{R} , sequence and series, limit sup. and limit inf. of a bounded sequence. Convergence and divergence of positive term series (simple problems only).

UNIT-II

Continuity, uniform continuity, the algebra of continuous functions, monotonic functions, types of discontinuities, infinite limits and limits at infinity. Differentiability, Rolle's Theorem, Mean Value Theorems, Riemann sum and integral and Uniform Convergence (simple problems). Functions of several variables.

TEXT BOOKS:

Apostol, T.M (1985), Mathematical Analysis, Narosa, India Ed.

Courant, R. and John, F. (1965), Introduction to Calculus and Analysis, Wiley.

S.C. Malik, Mathematical Analysis, New Age International Limited.

Miller, K.S (1975) Advanced Real Calculus, Harper, New York.

STATISTICAL METHODS

COURSE NO: ST18110GE

No. of Credits-2

UNIT-I

Descriptive Statistics: Measures of central tendency, Characteristic for an ideal measure of dispersion, Measure of dispersion range, quartile deviation, variance, standard deviation, coefficient of variation, Skewness and Kurtosis.

UNIT-II

Measures of Co-relation: Scatter diagram, Karl Pearson Coefficient of correlation, Rank correlation, Regression, Lines of regression, Regression co-efficient, Fitting of regression lines.

TEXT BOOKS:

- S.C. Gupta & V.K Kapoor (2012), Fundamentals of Mathematical Statistics, Sultan Chand & Sons,
- Dudewicz, E.J. and Mishra, S.N. (1988): Modern Mathematical Statistics, Willy, Int'l Students edition.

19/11/2018

TESTING OF HYPOTHESIS-I (PARAMETRIC)

Course No: ST18111GE

No. of Credits-2

UNIT I

The basic idea of significance test, Null and alternative hypothesis, two tailed and one tailed test of hypothesis, Type I & Type II errors, level of significance, critical region, degree of freedom, concept of p-value.

UNIT II

Test for large samples: test of mean, test for difference between mean of two samples, test for difference between the standard deviations of two samples. Tests of proportions: single and difference of proportion, Chi-square test: for independence of attributes and goodness-of-fit.

19/11/2018

BASIC TIME SERIES ANALYSIS

COURSE NO: ST18112OE

No. of Credits-2

UNIT –I

Introduction to time series, Components of Time Series: Secular Trend, Seasonal Variations, Cyclic Variations, Irregular variation., Mathematical Models of Time Series, Main objectives of analysing Time Series.

UNIT –II

Measurement of Trend, Graphical Methods, Method of Semi-Averages, Method of moving averages, Method of Least squares, fitting by Principle of Least Squares, Merits and Limitations of given methods.

19/11/2018

PROBABILITY AND DISTRIBUTION THEORY - II

COURSENO: ST18201CR

No. of Credits-4

UNIT-I

Sampling distributions: Chi-square and F distributions and their properties and applications, Non-central F and Chi-square distribution. Test of significance of F and Chi-square.

UNIT-II

Sampling distributions: t distribution and its properties and applications, Non-central t-distribution. Test of significance of t.

Bivariate distributions: Bivariate normal distribution, exponential and multinomial distributions and their properties, marginal and conditional distributions. Expectations and conditional expectations, covariance.

UNIT-III

Bivariate discrete distributions: Power series distributions and generalized power series distribution and its properties, relations and applications.

Order Statistics: Distribution and properties. Joint and marginal distributions of order statistics. Distribution of median and range. Discrete order statistics and their joint pmf. Limiting distribution of nth order statistics. Extreme value laws and their properties. Correlation between extremes.

UNIT-IV

Convergence: Convergence of a sequence of random variables, convergence in probability, almost sure, Convergence of a sequence of pair of random variables. Convergence of moments.

Chebyshev's and Kintchine's weak law of large numbers (WLLNs): Condition for the WLLNs. Strong law of large number and Kalmogrov's theorems and examples.

CLT: Introduction of CLT. Lindberg Levy, Liapunov forms and De-Movier's central limit theorems (CLT) and examples.

TEXT BOOKS:

2nd - Semester for Batch 2018 wef 2018 and onwards BOSPG held on
19/11/2018

LINEAR MODELS AND REGRESSION ANALYSIS

COURSE NO: ST18202CR

No. of Credits-4

UNIT-I

Linear models; Gauss Markov set up, Model classification, Normal equations and least squares estimates, Error and estimation space, Variance and covariance of least square estimates, Estimation of error variance, estimation with correlated observations, least square estimates with restriction on parameters.

UNIT-II

Test of hypotheses for one and more than one linear parametric functions, Tests of linear hypotheses, estimable linear hypotheses, confidence intervals and prediction intervals, Generalized F test, generalized t test.

UNIT-III

Experimental Design models; Introduction, Point estimation, Re-parameterization, Variance and Covariance of estimable function, testing of hypotheses, Regression models.

UNIT-IV

Simple linear regression fit of polynomials, Residual and their plot as tests for departure from assumption such as fitness of model, normality, and homogeneity of variances and detection of outliers, Analysis of covariance, estimation and testing ,one way model with one covariance, two way model with two covariance

TEXT BOOKS:

- Cookers.and Weisberg, S (1982). Residual and Influence in Regression. Chapman and Hall

19/11/2018

ADVANCED STATISTICAL COMPUTING

COURSE NO.: ST18203CR

No. of Credits-4

UNIT-I

R Software: Introduction, Types of functions: Data functions, Summary functions, Elementary functions and graphical functions. Commands/Statements in R for descriptive Statistics, representation of Multivariate data.

UNIT-II

Using R Software's: Correlation & Regression analysis: simple and multiple. Tests of significance, Test of significance of large samples, Test of single proportion, Test of significance of difference of proportions.

UNIT-III

Using R Software's: Difference of mean & proportion, Chi-Square test for independence of attributes and Contingency table, t-test, Paired t-test, Test for correlation in sampling from normal population, F-test, testing of two variance of two univariate normal population.

UNIT-IV

Using R Software's: Simulation Studies, random number generation of various probability distributions. Codes for different programmes in R-Software. Estimation of parameters of different probability functions by using R.

TEXT BOOKS:

- S.C. Gupta & V.K. Kapoor (2012), Fundamentals of Mathematical Statistics, Sultan Chand & Sons.
- Dudewicz, E.J. and Mishra, S.N. (1988): Modern Mathematical Statistics, Willy, Int'l Students edition.

ADVANCED SAMPLING TECHNIQUES

Course No: STM18204CR

No. of Credits-2

UNIT- I

Double Sampling: Double Sampling for Stratification including estimation of variance. Variance of ratio and regression estimates in double sampling. Double sampling for pps estimation. Sampling on successive occasions: Sampling on two occasions, estimation of current population mean.

UNIT- II

Two-stage sampling: (a) Equal first stage unit; estimation of population mean and its variance and estimates of variance. Comparison with one stage sampling
(b) Unequal first stage unit; estimation of population mean. Expected values and variance of different estimates including the case of probability proportional to size

TEXT BOOKS:

- Cochran, W. G: Sampling Techniques, 3rd edition, Wiley.

19/11/2018

OPERATIONS RESEARCH - I

Course No: ST18205DCE

No. of Credits-4

UNIT I

Definition and scope of Operational research, Necessity of Operations Research in Industry; phases in Operations Research. LP problems: Simplex method and Extreme point theorems; Revised Simplex Method, Transportation and Assignment Problems with their methods of solution.

UNIT II

Duality in LPP, Symmetric and asymmetric dual problems, duality theorems, Primal-Dual Relations, Complementary Slackness Theorem and Complementary Slackness conditions, Dual Simplex Method.

UNIT III

Decision Making in the face of competition, two-person, Zero sum games, Games with mixed strategies, existence of solution and uniqueness of value in zero-sum games, finding solutions in 2×2 , $2 \times m$ and $m \times n$ games, Equivalence between game theory and linear programming problem.

UNIT IV

Sequencing and scheduling problems: 2 machine n-job; 3 machine n-job problems with identical machine sequence for all jobs; 2-job n-machine problem with different routings. Project management; PERT and CPM; Probability of project completion.

TEXT BOOKS:

19/11/2018

ACTUARIAL SCIENCE

Course No.: ST18206DCE

No. of Credit-2

Unit I:

Survival models, sickness and marriage models in terms of Markov processes, force of mortality, hazard rate. Actuarial symbols tp_x and tq_x and integral formulas, Gompertz-Makeham laws of mortality, life tables

Unit II:

Lifetime distributions and estimation, Failure rate, mean residual life and their elementary properties, types of censoring, Estimation of survival function, Kaplan-Meier estimate, Nelson-Aalen estimate and their applications, Semi-parametric regression for failure rate, Cox proportional hazard model

Recommended Textbooks:

- Cox, D.R. and Oakes, D., Analysis of Survival Data, Chapman and Hall, New York.
- Gross A.J. and Clark, V. A., Survival Distributions: Reliability, Applications in the Biomedical Sciences, John Wiley and Sons.
- Elandt - Johnson, R.E. Johnson N.L., Survival models and Data Analysis, John Wiley and Sons
- Miller, R.G., Survival Analysis (Wiley)

INVENTORY AND QUEING THEORY

Course No.: ST18207DCE

No. ofCredit-2

UNIT- I

Analytical structure of inventory problems; ABC Analysis: EOQ problem with and without shortages with (a) production is instantaneous (b) Finite Constant rate (c) shortages permitted random models where the demand follows uniform distributing, multistage inventory subject to constraints,

UNIT - II

Queuing models-specifications and effectiveness measures. Littles formula, Steady-state solutions M/M/1 and M/M/C models with associated distributions of queue-length and waiting time. M/G/1 queue. Steady-state solutions of M/E_k/1. Transient solution of M/M/1 queue.

TEXT BOOKS:

SAMPLING THEORY

COURSE NO: ST18210GE

No. ofCredits-2

UNIT-I

Basic concepts of sampling from a finite population; sampling versus complete enumeration; simple random sampling with replacement and without replacement, Concept of sampling design, expected value and sampling variance of the sample mean, expected value of the sample mean square and estimation of the variance.

UNIT-II

Stratified random Sampling: Estimation of the population mean/total and its variance, choice of sample sizes in different strata, variance under different allocations. Comparison with un-stratified sampling. Estimation of the gain in precision due to stratification, construction of strata.

Text Books:

- Cochran, W. G: Sampling Techniques, 3rd edition, Wiley.
- Mukhopadhyay, P. (2000): Theory and Methods of Survey Sampling, Prentice Hall of India, Private limited, New Delhi
- Des Raj & Chandak (1998): Sampling Theory, Narosa.

2nd - Semester for Batch 2018 wef 2018 and onwards BOSPG held on
19/11/2018

TESTING OF HYPOTHESIS - II (NON - PARAMETRIC)

Course No: ST18211GE

No. ofCredits-2

UNIT-I

Non- Parametric Inference: Introduction, Advantages and disadvantages of non- parametric tests. Sign Test-one sample and two samples, Wilcoxon-Signed rank test- one sample and two samples, Wilcoxon –Mann Whitney test ,test of randomness based on total number of runs,Wald –Wilfwitz run test, ARE.

UNIT-II

Empirical distribution functions, Kolmogrov-Smirnov- one sample and two samples test (for samples of equal size), Median test. Mood Test, Ansari – Bradley Test, ARE, Linear rank statistics, distribution properties of the linear rank statistics.

BASIC DESIGN OF EXPERIMENTS

Course No: ST18212OE

No. of Credits-2

UNIT-I

Design of experiments, Principles of Design of experiments (randomization, replication, local control) Assumptions, layout and Analysis of Completely Randomized Design (CRD), Randomized Block Design (RBD), One missing observation in RBD.

UNIT-II

Factorial experiments: General factorial experiments, factorial effects; Main effects and Interactions. Best estimates and testing the significance of factorial effects; study of 2 and 3 factorial experiments in randomized blocks; Yates method for computing different factorial effects.

Text Books:

- S.C. Gupta & V.K Kapoor (2010), Fundamentals of Applied Statistics, Sultan Chand & Sons,

STATISTICAL INFERENCE – I

COURSE NO: ST18301CR

No. of Credits-4

UNIT-I

Statistical Inference: Problems of estimation and Point Estimation, the general statistical decision problem, Example (Point estimation, Interval estimation etc.). Criteria of unbiasedness, consistency and efficiency. Chapman Robin's Inequality, Cramer-Rao Inequality. Minimum variance unbiased (MVU) estimation, UMVU Estimation, Asymptotic relative efficiency, Invariance of consistent estimator under continuous transformation.

UNIT-II

Sufficient and Complete Statistics: Sufficiency, Minimal sufficient statistic, Factorization theorem, Fisher–Neyman criterion. Characterization of distributions. Admitting Sufficient Statistics. Exponential families and Pitman families, Invariance property of sufficiency under one to one transformation of sample space. Fisher information for one and several parameter models. Rao-Blackwell theorem. Completeness and Lehman –Scheffle theorem.

UNIT-III

Methods of estimation: Moments Method, Method of maximum likelihood (MLE). Optimum properties of MLE. Maximum Consistent Asymptotic Normal estimators (CAN) obtained by MLE method in one parameter exponential family. Other methods of estimation: Minimum Chi –square, modified minimum Chi –square and least square estimate.

UNIT-IV

Interval Estimation: Determination of confidence interval based on small sample. Determination of confidence interval based on large samples. Relation between confidence estimation and hypothesis testing. Bayesian Interval estimation.

TEXT BOOKS:

- Kale, B.K. (1999): A first course on Parametric Inference, Narosa Publishing House.
- Rohatgi, V. (1988): An Introduction to Probability and Mathematical Statistics. Wiley Eastern Ltd. New Delhi (Student Edition)

19/11/2018

MULTIVARIATE ANALYSIS

COURSE NO: ST18302CR

No. of Credits -4

UNIT-I

Multivariate Normal Distribution Theory: Marginal and conditional distribution, Joint distribution, Linear function of correlated normal variate. Characteristics function of multivariate normal distribution, Maximum likelihood estimation of the mean vector and co-variance matrix and their independence. Distribution of sample mean vector. Large sample behavior of mean vector and co-variance matrix. Distribution of non-central chi-square.

UNIT-II

Quadratic form and its distribution. Multiple and partial correlation co-efficient and their sampling distribution. Simple regression model, regression co-efficient and distribution of sample regression co-efficient. Test of linear hypothesis about regression co-efficients and interval estimation.

Canonical Correlation and Canonical variables: Definition, uses, estimation and statistical inference. Distribution of characteristic roots and vectors: The distribution of canonical Correlation.

UNIT-III

Distribution of sample co-variance matrix and the sample generalized variance; Wishart matrix and its distribution. Some important properties of the Wishart distribution. Characteristic function of Wishart distribution.

Generalized T^2 statistics: The general T^2 statistics, Derivation of the generalized T^2 statistics and its distribution. Some important properties of T^2 statistics and its uses. Two-sample problem with unequal co-variance matrices. Likelihood criterion for testing independence of set of variate and its moments. Walk's lambda criterion and its distribution. Mahalanobis D^2 statistics and its distribution.

UNIT-IV

Classification and discrimination: Classification and discrimination procedure for discrimination between two multivariate normal populations. Sample discriminant function, tests associated with discriminate function, standards of good classification, probability of misclassification and their estimation, classification into two and more than two multivariate normal population

Principal Component: Definition of principal components, uses, estimation and computation, Statistical inference on principal components.

Factor Analysis: Definition of factor analysis and uses, linear factor models, estimation of factor loading, Factor rotation, estimation of factor scores.

TEXT BOOKS:

SURVEY PROJECT

Based on Data

Using Statistical Software

Choice Based Credit System (CBCS) Syllabus for M.A./M.Sc. Statistics
3rd - Semester for Batch 2018 wef 2018 and onwards BOSPG held on
19/11/2018

DATA ANALYSIS USING SPSS

COURSE NO.: ST18304CR

No. of credits -2

UNIT-I

Measurement Scales- Nature of Variables: Types of Data. Introduction to SPSS, entering variables, labelling variables, labelling values, entering string variables, Transformation of variables, Exporting and Importing data files from other packages, selecting cases, Recoding data, computing functions (creating new variables). Measures of Central Tendency and their interpretation, OLAP Cubes, Summary Statistics (overall and for groups of cases), Dispersion, Skewness, Quartiles, Percentiles and Kurtosis. Saving data and output files. Split files, Weight cases, Graphical Representation of Data- Bar Charts, Stacked Bar, Histogram, Line diagram, Pie diagram, Box Plot, Multiple Box Plot, Error bar, Stem-and-Leaf diagram, Exporting Graphs. Three dimensional Graphs. Missing values analysis. Generating Random variables, Embedded Tables. Basic distributions (Binomial, Poisson, Normal, Exponential etc.) Generating random samples from these distributions. Cross Tabs, odds ratio and risk ratio.

UNIT-II

Correlation Analysis: Scatter plot, Karl Pearson's, Spearman's and Partial correlation, Concept of p-value.
Regression Analysis: Introduction to linear models. Simple linear regression involving two variables. Multiple Linear regression including stepwise Regression. Significance of R^2 and Adjusted R^2 , significance of Regression Coefficients. Concept of Multicollinearity and Tolerance, and their remedies. Model diagnostics.
Parametric Tests: Normal Probability curve, checking normality assumption using histogram, box plot, quantile (Q-Q), and probability (P-P) plots. Kolmogorov-Smirnov's and Spiro-Wilk's tests for normality. Basic concepts of Testing (hypothesis, types of errors, power, critical value, level of significance), one-sample t-test, independent t-test, paired t-test, one-way &, two-way ANOVA. Repeated ANOVA.

TEXT BOOKS:

S.C. Gupta & V.K Kapoor (2012), Fundamentals of Mathematical Statistics, Sultan Chand & Sons.
Dudewicz, E.J. and Mishra, S.N. (1988): Modern Mathematical Statistics, Willy, Int'l Students edition.

19/11/2018

DEMOGRAPHY

COURSE NO: ST18305DCE

No. of Credits-4

UNIT I

Introduction and definition of vital Statistics, coverage and content errors in demographic data, use of balancing equations, Chandra Sekharan-Deming formula to check completeness of registration data. Accuracy of age data on sex and age: Whipple's and Myer's indices. Dependency ratio.

UNIT II

Measure of fertility; relationship between CBR, GFR and TFR. Mathematical models on fertility and human reproduction process, Dandekar's modified binomial and Poisson models. Distributions of time to first birth, William Brass Model, Singh's model and Singh's modified model, inter-live birth intervals and of number of births, estimation of parity progression ratios from open birth interval data.

Unit III

Mortality: concepts and rates; measures of infant mortality rate. Force of mortality. Life table and its construction: Complete and abridged. Greville's and Reed-Merrells methods. Relationship between life table functions and their estimation. Relationship between abridged life table functions.

Unit IV

Population projection: Methods for population projection. Use of Leslie matrix. Frejka's component method. Logistic Model for population growth and their fitting to population data. Migration: concepts and rates. Uses of place of birth and duration of residence data.

TEXT BOOKS:

- Bartholomew, D.J. (1982). Stochastic Models for Social Processes, John Wiley.
- Benjamin, B. (1969). Demographic Analysis, George, Allen and Unwin.
- Ching, C. L. (1968). Introduction to Stochastic process in Biostatistics, John Wiley.
- Cox. P. R. (1970). Demography, Cambridge University Press
- Keyfitz, N. (1977). Applied Mathematical Demography, Springer Verlag.
- Spiegelman, M. (1969). Introduction to Demographic Analysis; Harvard University Press.

19/11/2018

OPERATIONS RESEACH - II

COURSE NO.: ST18306DCE

No. of credits -2

UNIT I

Integer Programming: Gomory's Cutting Plane algorithm & branch and bounded method for all integer and mixed integer, Dynamic programming: Single additive constraint; additive separable return, single multiple constraints; additive separable returns, Single additive constraints; multiple separable returns.

UNIT II

Nonlinear programming, Formulation, Lagrange multiplier Technique, Kuhn Tucker necessary and sufficient conditions for optimality of an NLPP, constraint multivariable optimization with inequality constraints. Quadratic Programming problems: Wolfe's and Beale's algorithms for solving quadratic programming problems.

TEXT BOOKS:

- Taha H.A. (1982) Operational Research: An introduction;
- Macmillan. Hadley G.(1964) Nonlinear and Dynamic Programming; Addison Wesley.

19/11/2018

BIO - STATISTICS

COURSE NO.: ST18307OE

No. of credits-2

UNIT-I

Epidemiological method: Evolution of Epidemiology, Causal relationship, establishing a causal relationship, Prevalence, Incidence, Prevalence versus incidence. Types of study design:- Cross-sectional study ; Case-Control study measures of association in case control studies, cohort studies; measures of association.

UNIT- II

Importance of sample size in research design: Diagnostic tests:- Accuracy of a diagnostic test, sensitivity and specificity; predictive values, limitation of predictive values. Bayes theorem, Likelihood ratio. LR of positive tests (LR+) & LR of a negative test(LR-). Post test odds when the test outcome is positive (negative). Tree method for obtaining post test probabilities, Receiver operating characteristics curve.

DATA ANALYSIS USING MINITAB

COURSE NO: ST18310GE

No. of Credits-2

UNIT-I

Statistical Software's: MINITAB reading and manipulation of data, descriptive statistics. Commands/ Statements in MINITAB, Working with Software Package MINITAB for graphics (Histogram, Plot, Box plot, Pi-chart, QQ plot, density plot, Stem and Leaf). Matrix processing (Basic operations, Eigen Values and inversion of Matrices etc.).

UNIT-II

Using MINITAB: Correlation and Regression analysis: simple and multiple. Simple hypothesis tests (t, χ^2 and F) and analysis of variance.

TEXT BOOKS:

- B. Ryan and B.L. Joiner (2001). MINITAB Handbook, Fourth edition, Duxbury.
- R.A. Thisted (1988): Elements of Statistical Computing, Chapman and Hall.

STANDARD PROBABILITY DISTRIBUTIONS - I

COURSE NO: ST18311GE

No. of Credits-2

UNIT-I

Discrete Random variable, Distribution function, Probability mass function. Mathematical expectation, Moments, moment generating function and their properties.

UNIT-II

Standard Discrete distributions: Uniform, Bernoulli, Binomial, Poisson, geometric and their mean, variances, moments and moment generating function properties and relations.

TEXT BOOKS:

- S.C. Gupta & V.K Kapoor (2012), Fundamentals of Mathematical Statistics, Sultan Chand & Sons,

STATISTICAL INFERENCE – II

COURSE NO: ST18401CR

No. of Credits-4

UNIT-I

Testing of Hypothesis: Concepts of critical regions, test functions, two kinds of errors, size function, power function, level of significance, Most Powerful (MP) and Uniformly most powerful (UMP) test, in class of size tests. Neyman Pearson Lemma, MP tests for simple null against simple alternative hypothesis.

UNIT-II

UMP tests for simple null hypothesis against one-sided alternatives and for one-sided null against one-sided alternatives in one parameter exponential family. Extension of these results to distributions with Monotone Likelihood ratio property.

UNIT-III

Likelihood ratio tests: Large sample properties, derivation of common likelihood ratio tests, asymptotic distribution of likelihood ratio test, Consistency of tests.

Uniformly Most Powerful Unbiased Tests, similar tests with Newman structure locally best unbiased tests, type A and A1 critical regions for the exponential family. Randomized test.

UNIT-IV

Sequential Analysis: Definition of Sequential Probability Ratio Test (SPRT). Fundamental relations among α , β , A and B. Determination of A and B in practice. Wald's fundamental identity and the derivation of O.C and ASN functions. Proof of the ultimate termination of SPRT for simple hypothesis. Examples based on Normal, Poisson, Binomial and Exponential conditions.

TEXT BOOKS:

INDUSTRIAL STATISTICS AND RELIABILITY THEORY

COURSE NO: ST18402CR

No. of Credits-4

UNIT-I:

Meaning and scope of SQC, Stewarts control chart, Statistical basis of a control chart, control chart for variables (X, R, & S) charts. Control charts for attributes (np, p & C) charts. Moving average charts. Operating Characteristic function (OC) and Average Run length (ARL) of X-bar chart.

UNIT-II:

Consumer and producer's risk, Operating Characteristic curve/function (OC). Corrective Sampling Plan (CSP), Average Sample Number (ASN), Average out-going Quality (AOQ), Graphical method of drawing AOQ, Average out-going Quality Limit (AOQL), Single Sampling Plan, Methods of finding n and c, Double Sampling Inspection Plan and sequential sampling plan.

UNIT-III:

Capability indices C_p , C_{pk} and C_{pm} . estimation, confidence intervals relating to capability indices for normally distributed characteristics.

Reliability concepts, hazard rate, distribution of longevity and moments. Some important theorems based on reliability theory.

UNIT-IV:

Common life time distributions: exponential, Weibull, gamma, Gumbel and normal distributions. Type I and Type II censored samples. Reliability and hazard rate of a system with independent units connected in (a) series and (b) Parallel systems.

DESIGN AND ANALYSIS OF EXPERIMENTS

COURSE NO: ST18403CR

No. of Credits-4

UNIT-I

Planning of experiment: Nomenclature, Introduction to basic designs and their analysis, Principles of experimental design. Completely Randomized Design (CRD), Randomized Block Design (RBD), Latin Square Design (LSD), missing plot techniques for RBD and LSD.

UNIT-II

Analysis of co-variance: Introduction, Analysis of co-variance model, normal equations, assumptions. Analysis of Covariance for Completely Randomized Design (CRD), Randomized Block Design (RBD), Latin Square Design (LSD). Numerical illustrations.

UNIT-III

Introduction to Incomplete block design intra block analysis (estimability), estimates of estimable linear parametric function; Balanced Incomplete Block Design. Intra block analysis, recovery of inter block information;

UNIT IV

General factorial experiments, factorial effects; best estimates and testing the significance of factorial effects; study of 2 and 3 factorial experiments in randomized blocks; Confounding, complete and partial confounding. Fractional replication for symmetric factorials.

TEXT BOOKS:

- Alokdey (1986): Theory of Block Designs, Willey Eastern
- Angela Dean Daniel Voss (1999): Design and Analysis of Experiments, Springer.
- Das, M.N and Giri, N. (1979): Design and Analysis of Experiments, Willey Eastern

Choice Based Credit System (CBCS) Syllabus for M.A./M.Sc. Statistics
4th Semester for Batch 2018 wef 2018 and onwards BOSPG held on
19/11/2018

INFORMATION THEORY

COURSE NO: ST18405DCE

No. of Credits -4

UNIT-I

Basic Concepts of Information Theory: Quantitative measure of information, Binary unit of information, measure of uncertainty and its properties, measure of information for two dimensional discrete and continuous finite probability scheme. Measure of mutual information. Shannon's fundamental inequalities. Redundancy, efficiency and channel capacity. Uniqueness of the entropy function, entropy maximization problem.

UNIT-II

Elements of Encoding: Purpose of encoding, separable binary codes, Shannon-Fannon encoding. Condition for noiseless coding. Fundamental theorem of discrete noiseless coding. Huffman's minimum redundancy code. Fundamental theorem of discrete encoding in presence of noise. .

UNIT-III

Entropy under Stochastic Regimes: Finite Markov Chains. Basic theorem on regular Markov chain. Entropy of a simple Markov chain. Entropy of a discrete stationary source. Discrete channels with finite memory. The extension of discrete memoryless noisy channels.

UNIT-IV

Inequalities of Information Theory: Kullback-Leibler measure of information. Mean information for discrimination and divergence and their properties, Some important generalizations of entropy measures and inequalities and their properties.

TEXT BOOKS:

- Reza, F.M.(2012).: An Introduction to Information Theory, McGraw Hill
- Mathai, A.M. and Rathie, P. N.: Basic Concepts in Information Theory and Statistics, Wiley Eastern.
- Ash, R.: Information Theory, Wiley Eastern.
- Kullback, S.: Information Theory and Statistics, Dover Publication.
- Yeung, R.W.A, First course of information theory(2004), Kluwer Academics.

Choice Based Credit System (CBCS) Syllabus for M.A./M.Sc. Statistics
4th Semester for Batch 2018 wef 2018 and onwards BOSPG held on
19/11/2018

BAYESIAN ANALYSIS

COURSE NO: ST18406DCE

No. of Credits-2

Unit I

Fundamentals of Bayesian Statistics: Conditional probability and its applications in Bayesian analysis, Bayes theorem for events, Bayes factor, Generalized Bayes theorem for events, Bayes theorem for future events, Bayes theorem for random variables, and Sequential nature of Bayes theorem.

Unit II

Prior distribution and types of prior distributions, proper prior, improper prior, conjugate prior, Jeffrey's prior, informative and non-informative priors.

Bayesian method of estimation: Bayes estimation of Binomial, Poisson, exponential, Weibull and normal distributions by using various types of priors.

19/11/2018

ECONOMETRICS

COURSE NO: ST18407DCE

No. of credits -2

Unit- I

Nature, Scope and meaning of Econometrics: Two Variable Linear Regression Model: Assumption, Estimation of Parameters, Tests of Significance and Properties of Estimators- Functional forms of Regression Models – Log linear Models, Semi Log-models and Reciprocal models – Choice of Functional Form.

Unit- II

Serial Correlation & Heteroscedasticity : Econometric modeling: Model Specification and Diagnostic Testing, Model selection Criteria, Types of Specification of Error, Consequences of Model Specification of Error, Tests of Specification of errors, Errors of measurements. Linear Probit Model (LPM): Application of LPM, Logit Model, Probit Model, Dynamic Econometric Model, Autoregressive and distributed Log Models

DATA ANALYSIS USING R SOFTWARE

COURSE NO: ST18410GE

No. of Credits-2

UNIT-I

Statistical Software R : Reading & Manipulation of data, Commands/Statements in R, different types of functions in R software, Descriptive Statistics, Working with Software package R for graphics, EDA: Histogram, Plot, Box plot, Pi-chart, QQ plot and density plot.

UNIT-II

Using R: Basic operations on matrices. Correlation and regression analysis. t-test for single mean, t-test for significance of difference of means and paired t-test. Chi-Square test for goodness of fit, independence of attributes and Contingency table and F-test.

TEXT BOOKS:

- R.A. Thisted (1988): Elements of Statistical Computing, Chapman and Hall.

4th Semester for Batch 2018 wef 2018 and onwards BOSPG held on
19/11/2018

STANDARD PROBABILITY DISTRIBUTION – II

COURSE NO: ST18411GE

No. of Credits-2

UNIT-I

Continuous Random variable, Distribution function, Probability density function, Mathematical expectation, Moments, moment generating function and their properties.

UNIT-II

Standard Continuous distributions: uniform, exponential, gamma and normal distributions, their mean, variances, Moments, moment generating function and their properties and relation.

TEXT BOOKS:

- S.C. Gupta & V.K Kapoor (2012), Fundamentals of Mathematical Statistics, Sultan Chand & Sons.
- Dudewicz, E.J. and Mishra, S.N. (1988): Modern Mathematical Statistics, Willy, Int'l Students edition.

4th Semester for Batch 2018 wef 2018 and onwards BOSPG held on
19/11/2018

BASIC BIO - STATISTICS

COURSE NO.: ST18412OE

No. of credits-2

UNIT-I

Epidemiological method: Evolution of Epidemiology, Causal relationship, establishing a causal relationship, Prevalence, Incidence, Prevalence versus incidence. Types of study design:- Cross-sectional study ; Case-Control study measures of association in case control studies, cohort studies; measures of association.

UNIT- II

Importance of sample size in research design: Diagnostic tests:- Accuracy of a diagnostic test, sensitivity and specificity; predictive values, limitation of predictive values. Bayes theorem, Likelihood ratio. LR of positive tests (LR+) & LR of a negative test (LR-). Post test odds when the test outcome is positive (negative). Tree method for obtaining post test probabilities, Receiver operating characteristics curve.

Books Recommended
